In response to the realization that I would be stuck filling out meaningless paperwork on boring job even though I am a fast learner and have an engineering degree, I decided to do something about it and become engineer in another field. Turns out I really like this field, especially javascript. I enjoy its dynamic nature and versatility. It's fun, simple as that. Also enjoy working with data, would be interested in learning D3.js and databases.

SKILLS

HTML
CSS
SASS
Bootstrap
Javascript
jQuery
ECMAScript 6 with Babel
AJAX & JSON
Mustache.js/Handlebars.js
Npm
Webpack
React.js with Redux and related technologies(beginner level)
Fluent English language, spoken and written
Basic Photoshop

EDUCATION

Bachelor's in engineering
University of Belgrade, Faculty of Traffic and Transport Engineering
Graduated 2016

Frontend web developer course for 6 months at Cubes school
https://cubes.edu.rs/
Course had a lot of practical work consisting of building "dummy" projects
Technologies studied: HTML, CSS, bootstrap, javascript, jQuery, AJAX

40+ online courses on lynda.com, teamtreehouse.com, udemy.com and udacity.com
Courtesy of Cubes d.o.o and their premium accounts on these websites for students and employees alike
Technologies studied: SASS, advanced javascript, object orientated javascript, javascript templating, working with data on the web, ECMAScript 6, grunt.js, gulp.js, webpack, crossfilter.js, react.js with redux, etc

---

EXPERIENCE

Internship
At Cubes d.o.o(https://www.cubes.rs/). I worked in collaboration with their senior frontend developer Vladan Džulović on various optimizations and responsive adjustments of older/poorly coded websites and adding new features to their projects.

Cubes d.o.o(6 months)
After volunteering, I proceeded to work part time as a junior frontend developer, working on building user interfaces and templates for their PHP applications. Apart from maintaining and improving existing codebase, I have been responsible for building entire frontend for three new projects:

- Budihuman.rs – complete ground up rework, currently on test server*

- Distribucija.rs – complete ground up rework, currently on test server*

- Oasis HR agency – in queue for backend at Cubes d.o.o*

You can check out source code on my github account, test servers for these projects can be accessed during interview

---

MOTIVATION

While my time working for Cubes d.o.o has been a rewarding experience, I have learned on my own way more than I can use there on regular basis. I like to spend time learning and bettering myself and feel like there is nothing new to learn from their projects. It is clear to me that in order to progress further to my goal of becoming a javascript expert I must find a place where I can work on a larger scale projects, single page applications and learn some advanced modern frameworks. Hopefully, this is where you come in. Judging by the various technologies used at your company and large number of experienced developers, you seem like a great place to learn and do what I love at the same time.
